3/4" Long Screw

8x

Black Nylon 1/2" OD
3/8" Long Spacer
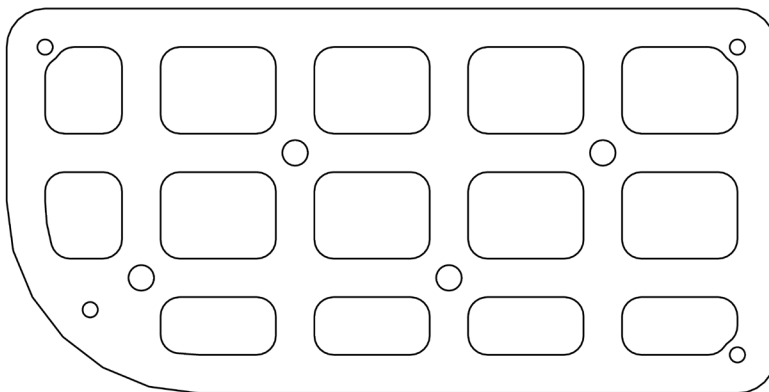

INCLUDED PARTS

FRONT

2x

OR

REAR

2x

INSTALLATION

1. Start by lining up the panel up on the side of your door panel on either the driver or passenger side, and align it visually to your liking trying to match the curve and spacing, as shown below (driver side). When the panel is lined up to your liking, then take a punch or a philips head screw driver and apply pressure to mark the four smaller mounting holes in the plastic.

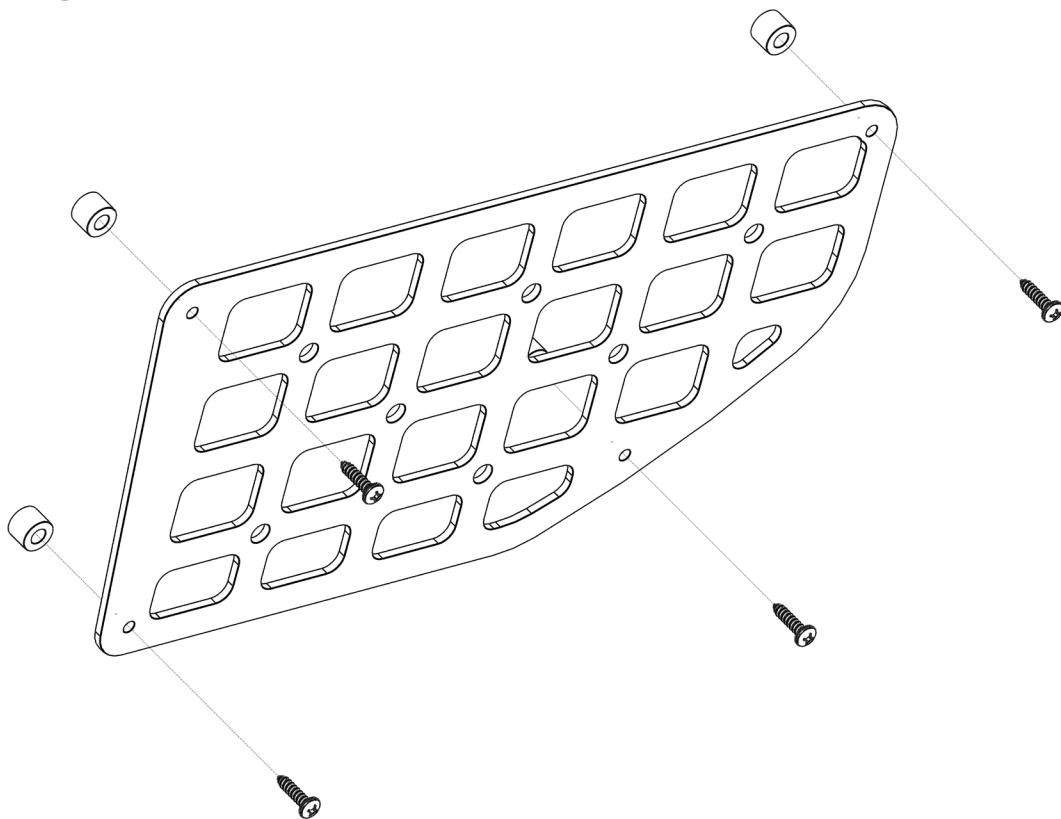

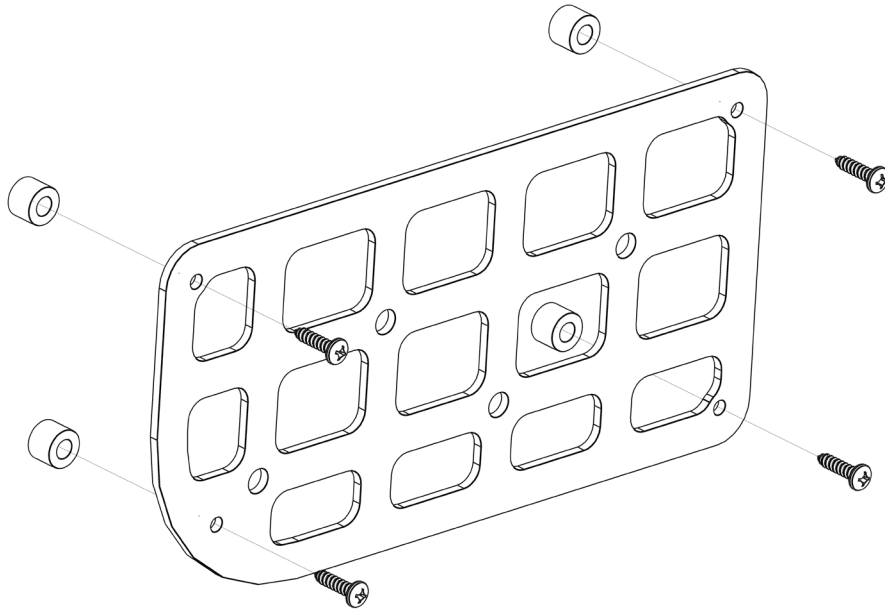

FRONT

REAR

INSTALLATION

2. Once the pilot holes are marked, you can remove the panel. Take the provided screws and start to thread them into the locations just marked in the plastic. Once the holes are established with the screws, remove the screws in preparation for the final installation. Make sure not to punch too far through the plastic. You can also use a drill with a 1/16" drill bit to start your holes.

3. After the holes are started, place the panel back in line with the holes and place the provided spacers behind the panel. You can then start to thread the screws into the plastic with a screwdriver until all four are snug and the panel is secure, be sure not to over tighten.
